

# Cu/CuSO4 Reference Electrode Datasheet

For cathodic protection potential measurement and monitoring applications.

Item	Details
Application	Potential measurement in soil-side cathodic protection systems
Specification Support	Cable length, body material, connector, and installation condition
Notice	Measurement procedure and field condition affect reading stability

## Typical Use

Pipeline CP testing, tank CP monitoring, field potential measurement

## Type

Portable or permanent Cu/CuSO4 reference electrode by requirement

## Accessories

Cable, connector, protection cap, and packaging by order

## Documents

Datasheet and inspection information by request

## Packing

Carton or export packing by order

## Documents Available on Request

Product datasheet, material information, inspection report, certificate of analysis, packing list, commercial invoice, and other agreed project documents can be discussed before order confirmation.

## Important Notice

Cathodic protection product selection should be confirmed according to project conditions, including resistivity, coating condition, current demand, design life, installation environment, and applicable project standards.

### Quotation Inputs

Product type, size, alloy, quantity, application, destination port, required standard, packaging requirement, and documentation requirement.

This document is for preliminary procurement review. Final specification, inspection scope, packaging, and delivery terms should be confirmed in the quotation and purchase order.
