

# Cathodic Protection Test Station Datasheet

For CP monitoring points, pipeline test posts, junctions, and field measurement access.

Item	Details
Application	Field measurement and monitoring access for CP systems
Specification Support	Terminal number, cable entries, material, color, marking, and installation design
Notice	Final configuration should follow project drawings and site requirements

## Typical Use

Pipeline test stations, CP monitoring points, junction boxes

## Materials

Post, terminal board, enclosure, cable accessories by specification

## Options

Above-ground post, test box, junction box, custom terminal layout

## Documents

Drawing, wiring schedule, and packing information by request

## Packing

Carton, wooden case, or pallet by order

## Documents Available on Request

Product datasheet, material information, inspection report, certificate of analysis, packing list, commercial invoice, and other agreed project documents can be discussed before order confirmation.

## Important Notice

Cathodic protection product selection should be confirmed according to project conditions, including resistivity, coating condition, current demand, design life, installation environment, and applicable project standards.

### Quotation Inputs

Product type, size, alloy, quantity, application, destination port, required standard, packaging requirement, and documentation requirement.

This document is for preliminary procurement review. Final specification, inspection scope, packaging, and delivery terms should be confirmed in the quotation and purchase order.
