

Zinc Sacrificial Anode Datasheet

For marine, hull, tank, and general corrosion control applications where zinc anodes are specified.

| Item | Details |
|-----------------------|---|
| Application | Marine and industrial sacrificial anode supply |
| Specification Support | Custom drawings and weights by order |
| Inspection | Composition, dimensions, weight, and packing review can be provided |

Typical Use

Hull anodes, tank anodes, offshore fittings, seawater/brackish water use

Material Reference

Zinc alloy anode, ASTM B418 reference when specified

Supply Form

Cast anodes, bracelet anodes, plate/hull anodes, custom forms

Core

Steel core or insert by drawing

Packing

Wooden case or seaworthy export packing

Documents Available on Request

Product datasheet, material information, inspection report, certificate of analysis, packing list, commercial invoice, and other agreed project documents can be discussed before order confirmation.

Important Notice

Cathodic protection product selection should be confirmed according to project conditions, including resistivity, coating condition, current demand, design life, installation environment, and applicable project standards.

Quotation Inputs

Product type, size, alloy, quantity, application, destination port, required standard, packaging requirement, and documentation requirement.

This document is for preliminary procurement review. Final specification, inspection scope, packaging, and delivery terms should be confirmed in the quotation and purchase order.
